

CASE AND DOCUMENT MANAGEMENT

Use Partner for Windows Case Manager for all case requirements from a simple note or due date to full case flow

These days law firms require data/information, document and matter management all in one. This is Case Manager, which is part of the Partner for Windows practice and case management system. Case Manager is a simple to use yet powerful document and matter management tool which enables firms to deliver services with greater efficiency. Everything has been written with the user in mind.

The Partner for Windows Case Management system is uncomplicated, yet functionally rich and can be implemented practice-wide, no matter what the legal discipline. It uses familiar Microsoft applications, e.g. Word - for documents, Outlook - for email (in and out of the case), tasks and appointments, Excel - for spreadsheets etc., all without the user having to open and close these applications. In addition, it uses SMS text messaging, PDF documents, Crystal reports and Oyez Legal forms, together with the ability to drag and drop most file types into the case flow – you can even store the digital dictation file in there if you wish. In essence, the paper file can be replicated which means that everything is available electronically: whether to email out of the case, to collate into a court or brief bundle or to upload to a client-accessible page of your website. Case Manager can be implemented for all case/work types at matter level as well as for any use at client level, e.g. marketing and credit control.

Here is a typical work flow screen from within Case Manager:
